

PharmaQMtraining.eu

OPEN COURSES

In our carefully-planned programmes, delegates receive up-to-date and forward-looking training in various regulatory areas of chemical and pharmaceutical importance

We offer both wide-ranging and specialist EU regulatory courses dealing with pharmaceutical issues from molecular discovery in the laboratory through chemical, pharmaceutical and analytical development and beyond to help companies create successful applications for Clinical Trial (CT) and Marketing Authorisation (MA) approvals

Our speakers are well-known European experts delivering Chemistry & Pharmacy regulatory training relevant to scientific/medical writing for investigational medicinal products (IMPs) and those drug products needing CTD Modules 1, 2 and 3 for EU medicines licensing and post-licensing

Our courses are delivered in attractive venues in provincial UK locations, which are easily accessible and less expensive than those in the capital cities of Europe

Most courses will include several interactive Mini-Workshops, a highly popular format

Informal, interactive groups of delegates working together with course leaders

The two-day courses offer exceptional value and include high-quality, carefully-structured training, accommodation for one night*, one breakfast, two lunches and a conference dinner, daytime in-course refreshments and a substantial delegates manual to reinforce the learning experience

*extra night(s) bookable if required, subject to availability
